PROCESSVUE

How to change Password Complexity

Abstract

Changing the Password to a Password more complex for your ProcessVue System.

1. Please make sure you close the browser accessing ProcessVue.

2. Depending on which package you have, go to either:

   a. **C:\inetpub\wwwroot\ProcessVue\SOE**

   OR

   b. **C:\inetpub\wwwroot\ProcessVue\Analyser**

3. Find the '**Web.config**' file and open it using Notepad or Notepad++

4. Find the '**membership**' section within th

```
<membership defaultProvider="SqlProvider" userIsOnlineTimeWindow="15">
        <providers>
                <add name="SqlProvider" type="System.Web.Security.SqlM
        </providers>
</membership>
```

5. Go to the end of the line starting <add name="SqlProvider"… etc.

6. At the end of the line just after passwordAttemptWindow="10" add the following:
   minRequiredPasswordLength="10"
   minRequiredNonalphanumericCharacters="2"

7. The end of the line should look like this

```
passwordAttemptWindow="10" minRequiredPasswordLength="10" minRequiredNonalphanumer
```

8. The new properties added will force users to have passwords with a minimum length of 10 in which 2 should be non-alphanumeric.

   Note: The numbers can be changed to meet requirement.

9. Save the file and close it.

10. The new rules will be applied from now onwards.
