Question.
I am attempting to develop a new ProcessVue instance.
For this instance we wish to use our new Wonderware data source, and am configuring a Wonderware collector.
When testing the configuration, I got the attached error message:
The SQL connection credentials used are correct, and they work in an ODBC connection.

Answer
Editing the registry key below should allow the connection,

HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Control\SecurityProviders\SCHANNEL\Protocols\TLS 1.0\Client: set Enable = 1.
