

ISDN SOFTWARE BUSINESS

ABOUT WMS

Manage your warehouse inventory in real-time, no matter where your facility is located. It automates various warehouse operations, including receiving, put away, replenishment, picking, and shipping, etc.

KEY FEATURES

- Suitable for third-party logistics companies and small businesses. Designed to be scalable, Leaptron's WMS solution provides continuous improvement for your inventory management and offering configurable results for strategic planning and data-driven decision making.

WAREHOUSE MANAGEMENT SYSTEM

By ISDN SOFTWARE BUSINESS

ISDN Warehouse Management System (WMS)

ISDN WMS is a cloud-based system that manages your warehouse inventory in real-time, no matter where your facility is located. It automates various warehouse operations, including receiving, put away, replenishment, picking, and shipping, and offers features such as smart planning, decision automation, automated categorization, barcode system, and voice picking add-ons.

Receiving

Receiving sales orders based on manufacturing output and existing stock.

Inventory

Receive real-time inventory updates including details like location, pallet number, or expiry date.

Picking

Improve efficiency by automatically creating order groups to create the best pick-up plan.

Stock Take

Manual stock take is time-consuming. Our system automates the stock take process so employees can get real-time, updated information on the inventory.

Kitting

Automatically group related items together so they can be packaged and supplied as one package.

BENEFITS

- Improved warehouse efficiency
- Increase stock accuracy
- Improve employee productivity
- Optimise workflows with automation
- Reduce manpower and operation costs
- Improve product handling process

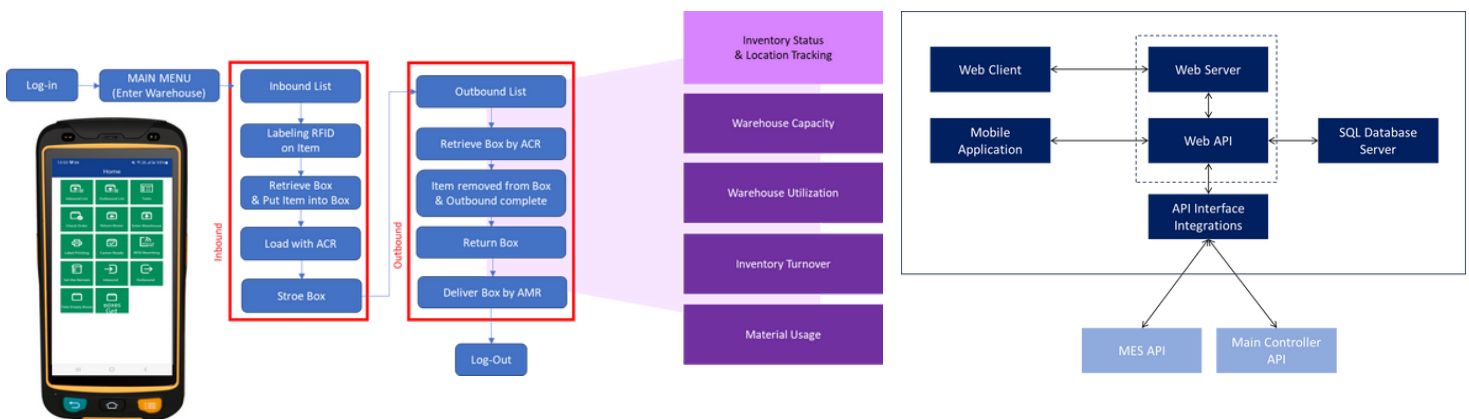

Applicable use cases

ISDN WMS solution is a versatile software solution designed to streamline and optimize various aspects of warehouse operations. With its robust feature set and flexibility, ISDN WMS system can support laptops and PDAs for Operators and be used for many different use cases across different industries.
